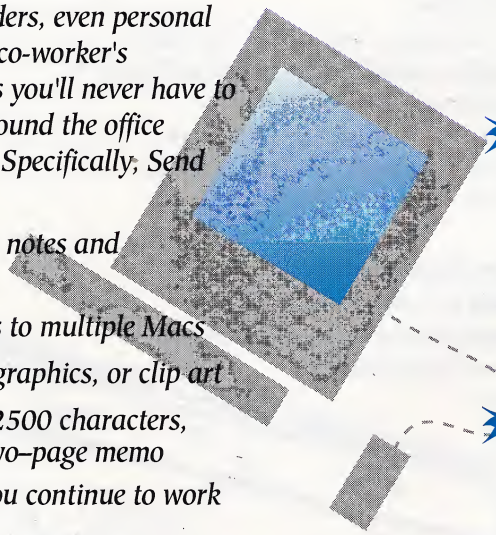
SEND EXPRESS

Macintosh Networking Without a Server

Send Express™ is a low-cost software solution for networking your work group's Macintoshes together. It installs as a desk accessory in about a minute, and then networks your collection of solitary office Macs into a powerful team of collaborative computers. With just a few clicks of the mouse, you'll be able to zap files, folders, even personal notes, right to your co-worker's Macs...which means you'll never have to walk your floppy around the office again to share files. Specifically, Send Express lets you:

- *send files, folders, notes and clipboards*
- *send multiple files to multiple Macs*
- *send bits of text, graphics, or clip art*
- *send notes up to 2500 characters, equivalent to a two–page memo*
- *send files while you continue to work on your Mac*
- *install and learn Send Express in minutes*
- *network your entire work team for less than $40 per Macintosh®*



Easy Networking

Send Express is a breeze to put in place. There's no need for network servers, administrators, publishing or mounting. You simply install *Send Express* as a desk accesssory, and then you're ready to send and receive files, folders, notes and clipboard selections from one Mac to another using Apple's built–in AppleTalk® network.

Works On Any AppleTalk Network

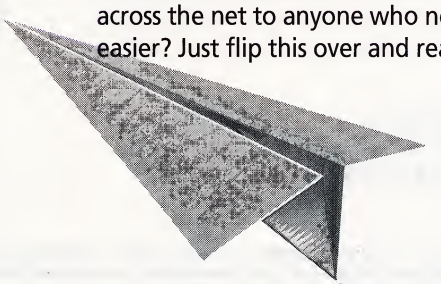
Whether you know it or not, chances are you're already on an AppleTalk network, which is Apple's standard way of connecting Macs together. One sure sign is if you have two or more Macs printing to a shared LaserWriter®. So once you know you're on an AppleTalk network, you can turn it into a *Send Express* network in just minutes.

Up and Networking In Minutes

We kid you not about being up and networking in a few minutes. According to our customers, *Send Express* installs in about a minute, and average learning time is five minutes. So in no time at all you'll have a full–fledged network up and running that will give your team the electronic bonding it needs to make your collaborative work electronically smooth.

Electronic Team Work Made Simple

With *Send Express*, your team work will really start to click. No more yellow sticky-notes stuck to teammate's chairs and terminals, when you can send notes electronically. No more plotting over how to transfer a file bigger than a floppy, when you'll just zap it over the net—however big it is. And no more hassles over desktop collaborations where two or more of you are working on a document, because you'll just copy and paste the paragraph (or photo, sound sample, or clip art) right across the net to anyone who needs it. What could be easier? Just flip this over and read on...



Gizmo® TECHNOLOGIES

SPECIFICATIONS

Send Whatever You Want
- Files, folders, notes and clipboards
- Files/folders of any size or type
- Multiple files/folders to multiple Macs
- Files that are larger than what will fit on a floppy disk
- Bits of text and graphics, anything you can copy to your Clipboard
